

How To Make Money Fast Online

Wednesday, 21 May 2008

Want to learn how to make money fast online? The secret is in using a duplicable, proven, step-by-step system. The fastest way to create bundles of cash online is reverse engineering - find a system that works, and create it for yourself.

Here is how to make money online in just 4 steps (I strongly advice taking action on this system while it is still fresh on your mind):

1. Find A High Converting Affiliate Product

Go to Clickbank's Marketplace, peruse the categories, and choose a product that is selling well. If a product has a relatively high Gravity rating, it shows that many affiliates are making sales of the product.

2. Create A Monetized Blog

Create a blog full of content related to the topic of your chosen product. Promote your product by pre-selling it with informative articles. At the end of every article, plug in a short plug for your affiliate product and put in your affiliate link.

3. Build A Mailing List

A list can act as your personal money machine. Whenever you want some extra cash, send a mailing to your list. Sign up for Aweber or Get Response and add in an opt-in form to your blog.

4. Send Traffic To Your Blog

Traffic is the one key component that separates a \$100 per month business and a \$10000 per month business. If you know how to drive traffic online, you will never be found wanting for customers and money. A blog is a great traffic generation tool because you send traffic to it by ranking it well in the search engines. You can also social bookmark your posts using Social Marker dot com and write articles and submit them to article directories.
